

Written in a clear, step-by-step style, this ideal teaching text makes cognitive therapy immediately accessible to students as well as to professionals new to cognitive therapy. The author uses a single case example to demonstrate how to conceptualize patients according to the cognitive model, plan treatment, conduct an initial session, structure therapy within and across sessions, incorporate homework, and use cognitive and behavioral techniques. Instructors will appreciate the book's emphasis on formulating cases, making decisions within therapy sessions, diagnosing problems in therapy, and using advanced techniques to modify core beliefs and underlying assumptions. Transcripts in every chapter richly illustrate the narrative.
