

Learn How to Become A More Complete Photographer With These Darkroom Techniques Today! Have you ever wondered how to make a darkroom print? My goal with this book is to walk you through the entirety of the process from selecting your film to pressing and toning a print. Here Is A Preview Of What Youll Learn Inside... First, I give a quick rundown on shooting film. In this chapter, you get tips on how to select your brand and ISO of film, and how that choice affects the final product. I also discuss how to take a properly exposed photo. Opening your film can be a little tricky. I break this down, with different technique suggestions, and also tell you how to load your film reel and tank. The next chapter is all about processing film for 35mm and 120mm. I talk about how to set up chemicals, use them, and dispose of them properly. I also discuss how to make contact sheets and how to use them to your benefit for making prints. I walk you through basic printmaking, from filter selection to test strips to the final print. Dodging and burning is a more advanced technique to further enhance the overall look of your image. Final print prep is also a very important step in the entire printmaking process. If you don't properly drain, dry, and press your photos, they won't be of great quality for display or selling. Toning is another advanced technique which will give your prints beautiful color and a unique pop others won't have. It's always important to digitize your prints and negatives so that you have them for further reference and for your website later as well. I go through all these things and more! Simply scroll back up the page to download your very own copy today!-----Tags: photography, photoshop, photography books, photography magazines, dslr, photography composition, landscape photography, darkroom photography, photography for beginners, photography lighting, digital photography for beginners, digital photography, dslr photography for beginners, portrait photography, dslr photography
