The human eye is an organ which reacts to light and pressure. As a sense organ, the mammalian eye allows vision. Human eyes help to provide a three-<sup>Â</sup> Structure - Vision - Dynamic range - Eye movement. Click on various parts of our human eye illustration for descriptions of the eye anatomy; read an article about how vision works.

It also helps the eye keep its round shape. Vision is the process by which images captured by the eye are interpreted by the brain, and the visible part of the eye is where the process of sight begins. On the front surface of the eye is the see-through, circle-shaped cornea. Chloe and the Nurb take you on a tour of the eyes and how seeing happens. Watch this *How the Body Works* movie!.
