

Today's landscape architects are finally breaking free from the constraints of a design philosophy which had advocated natural elements and the range of materials now being used in open space design is expanding enormously. Everything is possible but not everything is good and so Stucco, Stone and Steel presents successful projects which have been realized over the last few years and which are all distinguished by unusual materials or novel combinations of substances. The trends in contemporary art are inevitably appearing in modified forms in urban spaces. One example is the success of Cor-Ten steel. Sculptors such as Richard Serra elevated it to the spheres of fine art. From there it spread to architecture. Nowadays steel in public space is completely acceptable. This new diversity is not necessarily smooth, loud or colourful. There are often rough surfaces, severe lines and low-key greys. The projects by 27 well-known designers presented in this book show the potential of aluminum, synthetic resin, stucco or steel in combination with natural stone, concrete - and of course with trees, lamps and benches, culminating in successful public design.

Sniper One: On Scope and Under Siege with a Sniper Team in Iraq, Personages illustres du Canada, Volume 1 (French Edition), Observations on Florida reef corals treated with fish-collecting chemicals (Florida marine research publications), Vampires, Microsoft SharePoint 2010 Web Apps Quick Reference Guide (Cheat Sheet of Instructions, Tips & Shortcuts - Laminated Card), The Metamorphosis (Pulp! The Classics), Introduction to Technical Analysis (Reuters Financial Training),
